

# Cracking the Code: Surgical Coding in Gynecologic Oncology

**Course Directors:** David Holtz, MD and Kevin Schuler, MD, MBA

Join the SGO Coding and Reimbursement Subcommittee for a specialized course on coding in Gynecologic Oncology. Delve into the process of creating CPT® codes, spanning surgical and E/M services. Navigate coding for diverse cases in ovarian, cervical, vaginal, and endometrial cancer gynecologic malignancies, including pre-op consults, surgery, advanced care planning, and chemotherapy, enhancing your coding proficiency in a range of patient care scenarios.

In these case-based lectures, we will go through scenarios both common and complex, walking you through the billing of visits and surgery cases from start to finish. Presenters will also discuss new codes recently approved by the AMA RVS Update Committee (RUC) and how they can be utilized. Participants will be eligible for 3 CEUs upon completion.

## Learning Objectives:

1. Understand ICD-10 codes to demonstrate surgical complexity and address new surgical codes including those for HIPEC
2. Use Common Procedural Terminology combinations for surgical procedures
3. Add modifiers for coding clarity both in clinic and with surgical cases to maximize compliance and coding accuracy.
