

More than Additive: Multiplying our Impact in Endometrial Cancer Care

Course Directors: Dave Gaffney, MD, PhD, FACR, FABS, FASTRO; Katherine Fuh, MD, PhD; and Casey Cosgrove, MD

In this course, we will address endometrial cancer care from the role of surgery, radiation, and systemic treatment along with the application and impact of molecular classification in treatment options. With the recent FDA approval of new treatments in endometrial cancer, we will also discuss the process of these approvals.

Learning Objectives:

1. Describe the role of surgery including lymph node evaluation in endometrial cancer.
2. Define and apply molecular classification and biomarkers to guide treatment options such as immunotherapy
3. Discuss the role of RT in the management of endometrial cancer
4. Summarize the approval process by the FDA for treatments in endometrial cancer.
